Telecommunications Engineer

EXPERIENCE

Quality tester

Juillet 2008 - Mai 2009

Devoteam auSystems consultant in Sky Italia.

Validation and testing of new software version provided or loaded by myself in different types of satellite box produced by some manufacturers related to SKY Italia. The tests concerned the way the sw was installed, directly flashing the box or sending the manual or automated signal of upgrading on satellite transponders. To make this, I used respectively manufacturers tools and a Windows PC client and a remote server controlled by a console (PuTTY). I worked in collaboration with other labs involved in the check of hardware issues and another in the test of sw version reliability by the end-user side.

Software tester

Octobre 2006 - Juillet 2007

Prisma Engineering.

My task involved a Windows PC client simulating the link between one or more Wi-Max base/subscriber stations with some others, and a remote Linux PC server simulating the network and signalization packets (e.g. CIDs, packets). The process was controlled by TCL server-side and with some MS Visual C 6.0 programs client-side. The scripts and in a minor part the C code was modified by me when bugs were found, together with the developers.

LANGUAGES

- French
- English

SKILLS

Development

- C, Java, Tcl
- Visual Studio 6.0/.NET, NetBeans and Eclipse IDEs

Tools

- Mercury Quality Center
- Flashing tools for satellite boxes
- PuTTY, TeraTerm, VNC

Technologies

- OSs: Windows (all versions), Linux (Ubuntu, Suse)
- SQL tools and servers (MySQL, Apache Tomcat, MS SQL Server)

TRAINING

Politecnico di Milano

1998 - 2007

(Telecommunication Engineering),

HOBBIES

Free time activities

- Travel for education or leisure

- Read newspapers and technology magazines
- Listen to music about various genders, especially rock, easy listening and a bit of classical
